

Installing ROS for EE 106A/206A / BIOE 125

- On Ubuntu

14.04 Full instructions are at this URL: <http://wiki.ros.org/indigo/Installation/Ubuntu>, but the key command will be:

```
sudo apt-get install ros-indigo-desktop-full
```

16.04 Full instructions are at this URL: <http://wiki.ros.org/kinetic/Installation/Ubuntu>, but the key command will be:

```
sudo apt-get install ros-kinetic-desktop-full
```

Note: The labs are built around ROS Indigo, so your experience may vary when using ROS Kinetic (though they should largely align)

- On other OSs

1. Install Virtual Box (free!) at this URL: <https://www.virtualbox.org/>
2. Download and install the virtual machine (VM) as listed in “InstructionsForUbuntuVM.docx” located on bCourses at [Files/Labs/InstructionsForUbuntuVM.docx](#)
